

IBMS

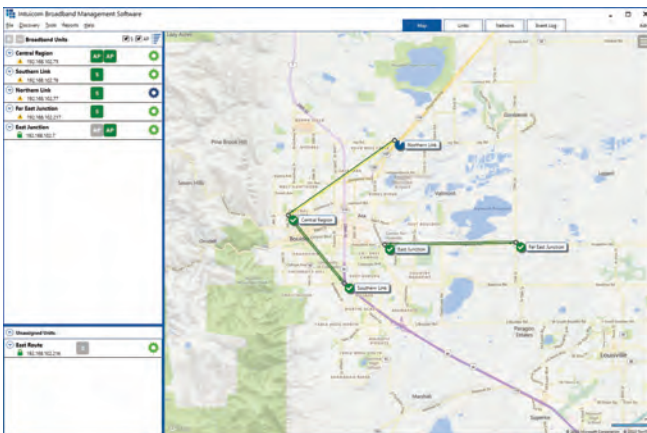

Intuicom Broadband Management Software

SECURING AND MANAGING YOUR WIRELESS NETWORK JUST GOT EASIER

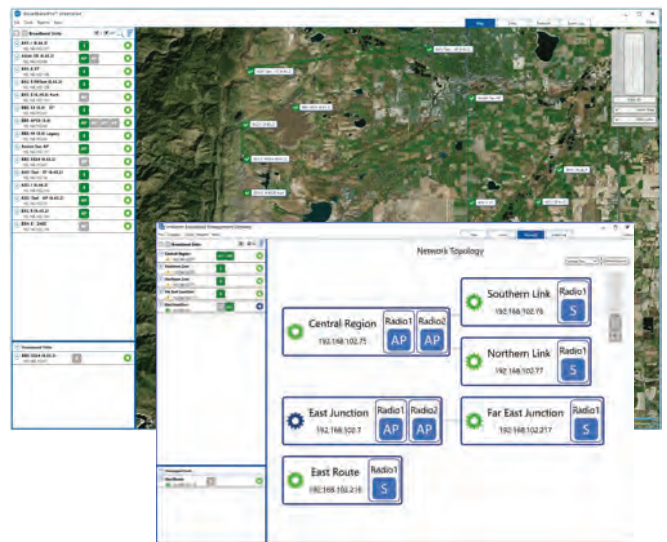

Focusing on enhanced security, intuitive operations and common workflows, the new user interface (UI) and other features of IBMS enable enterprises to efficiently manage and support growing networks.

End-to-end network management is easier with the visibility provided by Map displays, Topology views, and Intuicom's tabular formats. This visibility across the entire network provides administrators with the information needed to drill down and simplify the management of all network devices.

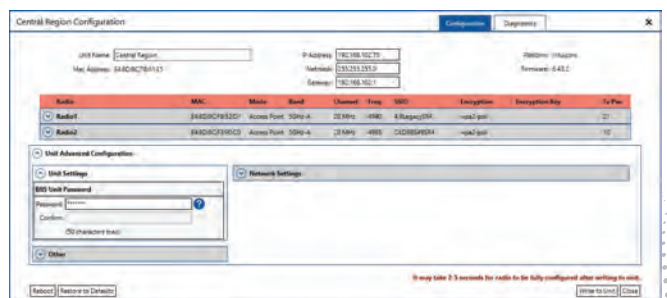

SECURE & EMPOWER YOUR CONNECTIVITY

- Secure all aspects of Network Management.
- Support more efficient Network Operations: users will spend less time and learn more about their networks from configuration to management and expansion.
- Optimize Return on Investment (ROI).

MANAGEMENT SIMPLIFIED

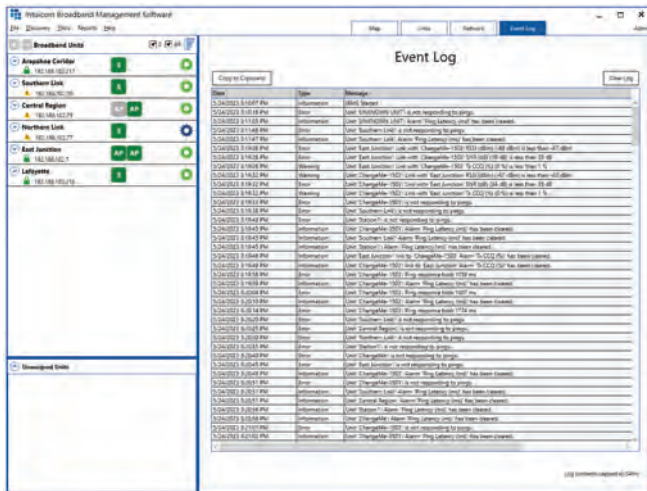

The updates and new features of IBMS have been designed with the operators in mind. Developed to incorporate all the great additions of the last decade with new capabilities focused on improving workflow, IBMS adds a fresh look and feel to improve the UI and simplify the user journey.

SIMPLICITY IN ALL ASPECTS OF OPERATION

VISUALIZE the Big Picture

- Real-Time Mapviews provide Performance Status, up-to-the-minute operational criteria, with access to any node and all performance and configuration details.
- Live Link Status displays both sides of the radio link.
- Wireless Topology can be used to optimize and reconfigure your network to improve performance or enhance security.
- Optional Dark and Light themes available. Designed to provide the personalization to fit into your operational environment.

IBMS IS FASTER, EASIER AND MORE RELIABLE THAN EVER & INTUICOM'S SUPPORT IS UNSURPASSED

With standard-setting software and field-proven, rugged broadband installations, Intuicom is the premier provider of reliable, robust solutions for point-to-point and point-to-multipoint networks. From high-bandwidth wireless backhaul solutions to complex networks, customers trust Intuicom to meet their needs. Our unsurpassed customer service will make sure your questions are answered, and our technical expertise in wireless, networking, and field installations ensure a successful deployment. Learn more about this innovative software at www.intuicom.com

CONFIGURATION Made Simple

- Access to Configuration Parameter from any Network View.
- Intuicom's unique Drag & Drop tool simplifies on-boarding new nodes.
- Dedicated Dashboards add an intuitive and consistent approach to device configuration.
- Immediate access to the configuration screen from anywhere.
- Pre-configure Intuicom devices so they will be automatically connected.
- Connectivity to Mobile Networks available using Intuicom's Port-Forwarding feature.

OPTIMIZE & MANAGE for Best Performance

- Complete Network Customization & Control - With IBMS, you can filter your network by radio name, IP address, station roles, access point roles, and every other combination possible.
- Wireless and Data Statistics Monitoring displays in real time.
- The Alarm Center provides a comprehensive status and analysis report of the entire wireless network, while providing real-time alarms of user-set parameters.
- Event Logging Dashboard monitors your complete network health on a single screen.
- Advanced Reporting features provide extensive graphic and tabular reports for all units across the network.
